                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   om of: 68-09-832-658-7 to: A_Geneseq_032802:* - out_format - pfs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             command line parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Database sequences: 74/5/4

 The fusion protein is useful for inhibiting angiogenesis in a patient. In may also be used to treat multiple sclerosis, librasis, inflammatory and antoinmune discases, cancers, hepatitis and which intertion characterised by neovascularisation. The present sequence is a fusion protein that comprises histidine tag, an enteroximase linker and human IFN-bota-Ia. The His daged IFN-bota fusion construct was used as a template for mutagenesis in the construction of various mutant His tagged-IFN-bota expression plasmids.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mment_block:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                he used in the treatment of viral diseases, as well as in the treatment of and openic diseases. IFN-betala is useful as an agent for the treatment, remission or attenuation of a disease state, physiological condition, symptoms or etiological factors, or for their evaluation or diagnosis. The IFN-betala polymer conjugates may also be used for prophylaxis or treatment of any condition or disease state for which the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         stay in the vasculature for longer periods of time, has increased stability in solution, reduced immunogenicity, protection of the modified IPN-beta-la from profeolytic diaestion and subsequent abouttion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAY84950-64 represent alanine mutants of human interferon beta la (IFN-betala) protein. The protein is used to produce a composition comprising a diycosylated [FN-beta coupled to a non-naturally-occurring
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI: 2000-339534/29.

              a human interferon beta alanine substituted mutant A: A. Taird by a human interferon beta alanine substituted mutant A: A. Taird by mutanting residues in the helix A of wild type sequence mutating residues in the Ala/Ser substituted mutants of IFN. beta having substitutions in the files A, B, C, D or E, or loops AB, C) or DE were assessed for helices A, B, C, D or E, or loops AB, C) or DE were assessed for helices binding and functional activities c.q. antiviral and antiprolliterative activities. The Al mutant shows antiviral and respect to receptor binding, compared to wild-type IFN. beta-la. The mutant can be used to produce IFN. beta fusion proteins.

Mote: The present sequence is not shown in the specification but is derived town with two beta-lations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WC200023472-A2.
                                                                                                                                                                                                                                        The patent discloses fusion proteins comprising alycosylated interferon-bota (IFN-beta) especially iFN-beta-la, linker groups and non-IFN-beta proteins, especially an immunoalcoulin (ia) protein. The non-IFN-beta protein is useful for inhibiting analogacies in a patient fusion protein is useful for inhibiting analogacies in a patient it may also be used to treat muttiple sclerosis, librosis, inflammatory and autoimmune diseases, cancers, hepatitis and viral intection and autoimmune diseases, cancers, hepatitis and viral intection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15-OCT-1999;

                and at least one removed amino acid residue comprisina an attachment aroup for the first non-polypeptide group. The invention also concerns reducing the immunogenicity and/or increasing functional in vivo half-life and/or serum half life of an interferon beta polypeptide comprising introducing an amino acid residue constituting an attachment group for a first non-polypeptide group into a position exposed at the context of 
                                                                                                                                                                                                                                                                                    Conjugates of the invention exhibiting interferon be a activity comprise at least one first non-polypeptide group covalently attached to an interferon beta polypeptide, the amino acid sequence of which

The invention also concerns reducing the immunogenicity and/or increasing fursticeal in vivo half-life and/or serum half-life of an interferon beta polypeptide comprising introducing an amino acid residue constitution an attachment group for a first non-polypeptide group into a position exposed at the surface of the protein that does not contain such a group and removing an amino acid residue constituting an attachment group for a first non-polypeptide group and subjecting the modified peptide to conjugate and a cell culture with the non-polypeptide group and subjecting the modified peptide to conjugate and a cell culture expressing the matched buspeetides are useful in the treatment of expressing the matched buspeetides are useful in the treatment of the protein actions are designed as a cell culture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             27-AUG-1999; 99DK-0001197.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          least one removed amino acid residue comprising an attachment group for the first non-polypeptide group. The invention also concerns reducing the immunoscolicity and/or increasing functional in give half life and/or second half-life of an interferon bota polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           multiple sclerosis comprises a non-polypeptide group covalently

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A conjugate exhibiting interferon beta activity useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI: 2001 218488/22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disease, especially multiple sclerosis, and for treating mammais having circulating antibodies against interferon beta la or 1b. DNA encoding the mutated proteins may be used for gene therapy. The DNA and proteins can also be used to treat viral interviens (or a viral hapatilis), cancer (e.g. breast cancer), inflammation, Crohn's disease, acute myeloid leukaemia, Hoddin's disease, acute myeloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              an amino acid residue constituting an attachment group for a first non-polypeptide group and subjecting the modified peptide to conjugation with the non-polypeptide group. The conjugate and a cell culture expressing the mutated polypeptides are useful in the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          first non-polypeptide group covalently attached to an interteron beta polypeptide, the amino acid sequence of which differs from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               exhibiting interferon beta activity comprise at least one

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25 AUC-2000; 2000WO-DK00471
an amino acid residue constituting an attachment group for a first non-polypeptide group and subjecting the modified peptide to conjugation with the non-polypeptide group. The conjugate and a real culture expressing the mutated polypeptides are useful in the treatment of disease, especially multiple sclerosis, and for treating mammals having circulating antibodies against interferon beta la or 1b. DNA encoding the

The inventors claim a multiclass hybrid interferon polypoptide and a IMAA unit having a nucleotide sequence which encodes it. Fret the AA sequence consists of alpha and beta interferons. Fret. IFL is (i) the 1-73 AA seq. of HuIFN alpha 1 (and IF2 is the 74 M% AA seq. of HuIFN-alpha-61a (see AAN30155, AAN30222); or (ii) the 1-41 AA seq. of HuIFN-alpha-61a (and IF2 is the 44-16% AA seq. of HuIFN beta 1) (see AAN30150, AAN30222).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            to the 5' terminal of human fibroblast IFN. The entire sequence of mature human fibroblast interferon is encoded by AAN10049 (see also MADP10051). Another recombinant IFN which was recovered differed the AAN10049 in that the coden for the 50th unino acid had a "silent" base change (TAC to TAT), indicating the existence of genic polymorphism (see AAP10052/N10051).
                                                                                                                                                                                                                                                                                                                                                                                        Multi:class hybrid interferon poly:peptide(s) - with restricted antiviral and cell growth regulatory activities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         N-PSDB; AAN30152
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                W08302461-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hybrid interferon; antiviral; therapy; cancer; tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pDM101/1rp/beta-1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Percent Similarity: 81.818
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 \frac{1}{4}n seq 1/1 to: AAP30219 trom: 1 to: 166
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 beta-IF and IF2 is the carboxy terminal of an alpha-IF (esp. the 17% seq. of HuIFN-supha-1 and the 74-167 seq. of HuIFN-supha-1 resp.) (see AAN30155, AAN30152). In the examples plasmeds pow5 and phM101/2:p/Weta-1 and platpha-41A were used (see AAN30151, AAN30152). HintI was used to diagest the DNA sequences in the region of sugnitional handleaps (see AAN30153, AAN30154, AAN30159), and the restriction tragments were ligated to form hybrid DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       )9-832-658-7 x AAP30219
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antiproliterative.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Astroses Teterenceses (BriAstert et ) (BriAstert 27), Wilbig 32x218; PibN; AA(629)2, 1) (Pib; 43)282
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Asstatus: preliminary
